SUMMARY

I am a full stack web developer with skills in html, css, and javascript. I also am familiar with aspects of the backend. I have experience with node.js, express, mysql databases, and MongoDB. My work background has been primarily in kitchens for the past ten years. I started as a line cook and worked my way up to being an executive chef at a fine dining restaurant. I believe the skills I learned in this field will translate nicely to web development. I learned to perform well under stress, multitask, and prioritize tasks. My time in restaurants has also left me with a very strong work ethic and no aversion to putting in extra hours when necessary either on or off the clock. This year I attended a full stack web design course at Vanderbilt University and have learned a lot in a short period of time. I have found that I am most interested in the front end and more specifically the design aspects of web development, but am also very interested in the back end as well. I desire to secure a full-time job as a junior developer and jump in headfirst. I enjoy a challenge and am well equipped to adapt when necessary.

EDUCATION

Vanderbilt University, Nashville, Tn — *Full Stack Bootcamp Certificate*

April 2020 - October 2020

Meridian High School, Meridian, Ms — *Diploma*

Class of 2007

PROJECTS

Trivia App — *Randomly Generated Multiple Choice Trivia Quiz*

Deployed Site - <https://serene-inlet-83004.herokuapp.com/>

Github Repository - https://github.com/proflonghair07/Project_2

- Project Description - A trivia app that pulls its questions from the opentdb api. Allows the user to sign up via email and join or create a team. The Application stores the user's scores and averages team scores via a MySQL database.
- Contributions - Handled all html templating and css styling. Developed the quiz portion of the app and connected it to opentdb

TECHNOLOGIES

HTML/CSS
Javascript
jQuery
Bootstrap
Bulma
Node.js
Express
MySQL
MongoDB

api..

Recipe App — *Recipe App That Finds Recipes Based On User Input*

Deployed Site - https://proflonghair07.github.io/Recipe_Finder/

Github Repository - https://github.com/proflonghair07/Recipe_Finder

- Project Description - A recipe finding app that utilizes the Spoonacular api. Allows user to search for recipes by keywords, and filter the results to be either vegan, gluten-free, neither, or both.
- Contributions - Created all html and css. Used the bulma framework for styling. Wrote all javascript using jQuery.
