Skills

HTML5

CSS

Bulma CSS framework

Bootstrap CSS framework

JQuery library

Vanilla JavaScript

I am a junior web developer looking to enter the field of web design. My entire work history up to this point has been in restaurant kitchens, and I climbed my way up fairly high and ended up being the head chef at an upscale southern restaurant called Silo. After the march 2020 Middle Tennessee tornados closed my restaurant's doors permanently I decided to pull the trigger on enrolling to a coding boot-camp. I am currently a little more than a third of the way through the program and am looking to transition into the field of web design as quickly as possible following graduation. The program I am in covers full stack web development. I went into the program with a little amount of experience with html and css, but learned much more about them in this course. I would say that I have a fairly solid understanding of both languages and at this point have quite a bit of coding in them under my belt. We have been working on javascript for a little over a month at this point and I have acquired quite a bit of knowledge on the language in that relatively short amount of time. I am fairly comfortable writing both vanilla javascript and using the jquery library. I also have a decent amount of experience with using api's. I am fairly comfortable using the bootstrap and bulma css frameworks as well. I enjoy the challenges of working with javascript, and the functionality it allows, but I have found more and more that the styling and frame-working of websites is the area I get most excited about. I am very excited to learn more javascript and see what all it will allow me to do, but I suspect when it is time for me to enter the job field I will lean more towards front end development.

Work History

2017-06 -

Executive Chef

2020-03

Silo, Nashville, TN
